

Tech Tip Tuesday

(say that really fast 5 times!)

Return of
Training

Michael Shiveley,
Technical Support Manager

Tip: Surge Protection

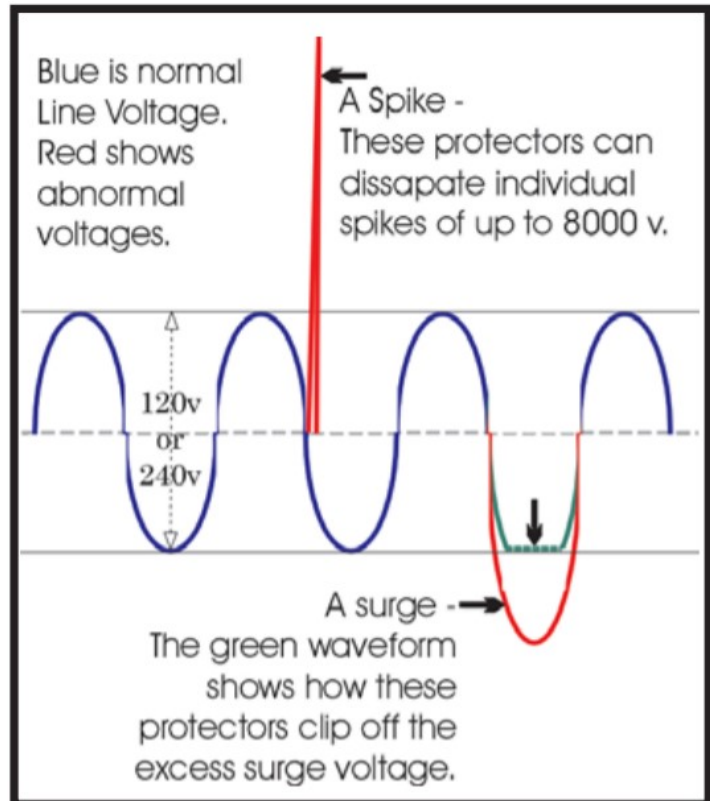

Why do I need this product? Variable Speed Motors often have some protection built in to the control module. No motor tested has protection as good as that found in the VZPRO or X13PR. Also, what do you do if the threshold voltage (described below) is exceeded and the internal protector fails? When that happens, the only option is to replace the module. That's really what we were trying to prevent, isn't it?
